

Multiple GPS to NMEA Devices

NMEA devices can include autopilot's, radar's, repeater's, DSC radio's, plotters etc

The GPS will require setting to the NMEA interface mode (normally NMEA 0183 v2.0 at 4800 baud)

The GPS can supply NMEA data to upto 3 NMEA devices.

Garmin GPS's use a *common ground* for power and data; the NMEA device may have a separate ground for the NMEA input, as shown.
